DETAILED ACTION

## Priority

1. This application filed under former 37 CFR 1.60 lacks the necessary reference to the prior application. The current status of all nonprovisional parent applications referenced should be included. "now US Pat. No. 6,701,752" should be inserted after "2001".

## Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - 'The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 13-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. 112 Rejections
- 4. Claims 13-18 are indefinite because they are directed to methods for lithography, yet they contain no lithography method steps. Note that method claims should be presented in positive step action format with each method step acting on the product of the previous method step, the final method step achieving the product to which the claim is directed

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1731

6. Claims 13-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hiraiwa et al (US 5679125). Hiraiwa et al taught the use of a sintered body in lithography processes utilizing an F<sub>2</sub> eximer laser. Hiraiwa et al also taught methods of making lithograpy mask substrates by providing a porous silica glass body, heating the body in a hydrogen atmosphere, and sintering the body in an atmosphere containing SiF<sub>4</sub> (see col. 8, line 38 to col. 10, line 32 and Table 1). Oxygen atmospheres were also used. However, it is the position of the examiner that the claimed lithography process reads on the lithography process disclosed by Hiraiwa et al regardless of the manufacturing process used to make the photomask. The current claims read as use claims of a product by a process. As such, the process of making the product does not limit the use of the product.

#### Conclusion

- 7. The prior art made of record and not relied upon is cited to further show the state of the art.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean E. Vincent whose telephone number is (571) 272-1194. The examiner can normally be reached on M F (8:30 6:00).
- 9. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven P. Griffin can be reached on (571) 272-1189. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
- 10. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
